

PILOT STUDIES PROVING
EFFICACY OF DENDRITIC
CELL THERAPY TO
PREVENT RELAPSES IN
PATIENTS OF OVARIAN CA

DR. J. A. KHAN & DR. S. YAQIN
INSTITUTE OF CELLULAR THERAPIES PVT. LTD.
NOIDA, INDIA.

ICT Pvt. Ltd. J-3, SECTOR 41,
NOIDA, INDIA

BACKGROUND

- n DEADLIEST MALIGNANCY
- n AFFECTS FEMALES OF ALL AGE GROUPS
- n REGULAR RELAPSES
- n MORTALITY IS UPTO 85%
- n SERUM CA-125 MARKER +VE STATUS

BACKGROUND

- n OVARIAN CA IS IMMUNESENSITIVE
- n SPECIFIC IMMUNE TX IS POSSIBLE
- n DISEASE PROGRESSION CAN BE DELAYED OR STOPPED
- n SERUM CA-125 ESTIMATION IS DIAGNOSTIC/PROGNOSTIC

OBJECTIVE

n SERUM CA-125 TEST INDICATES RELAPSE

n CAN BE UTILIZED FOR ESTIMATING
EARLY RELAPSE IN TREATED PATIENTS
OF FOLLOW-UP

n GENERATING SPECIFIC IMMUNOLOGY
MAY PREVENT DISEASE PROGRESSION

OBJECTIVE

- n DENDRITIC CELL (DC) – HALLMARK OF IMMUNOLOGY
- n MATURE DC – TRANSFORMS 3000-5000 NAÏVE T CELLS INTO COMMITTED T LYMPHOCYTES PER HOUR
 - n IT HAS POTENTIAL TO GENERATE TRILLIONS OF T CELLS IN ITS LIFE SPAN
- n 1MILLION DC IN EARLY STAGE DISEASE IS STANDARDIZED FOR DC THERAPY

METHODS

- n PERIPHERAL BLOOD MONONUCLEAR CELLS (PBMC) ARE TRANSFORMED INTO DENDRITIC CELLS OF OUR CHOICE
- n TSA/TAA EXPOSURE TRANSFORMS imDC TO mDC USED FOR THERAPEUTIC PURPOSE

ADVANTAGE

- n PROTOCOL WAS ALREADY IN USE IN ADVANCED STAGE PATIENTS OF VARIOUS CANCERS INCLUDING OVARIAN CA IN OUR CENTER
- n TAA/TSA BASED ON OVARIAN CANCER LYSATE (ICTova8 ANTIGEN) HAS BEEN STANDARDIZED

METHODS

- n STUDY PLANNED FOR TREATED PATIENTS HAVING EARLY RELAPSE
- n CA-125 SERVED AS IMPORTANT MARKER FOR EARLY RELAPSE
- n PATIENTS WERE ENROLLED ONLY IF THEY FULFILLED INCLUSION AND EXCLUSION CRITERIA

METHODS- INCLUSION CRITERIA

- n RENAL FUNCTION TESTS (WNL)
- n LIVER FUNCTION TESTS (WNL)
- n PERFORMANCE STATUS ECOG 0-1
- n NORMAL THYROID FUNCTION
- n NORMAL IMMUNE STATUS
 - n HIV, HBV, HCV SERO-VE
- n FREE FROM RADIATION/CHEMO LAST 1 MONTH

EXCLUSION CRITERIA

- n RADIOLOGICAL EVIDENT DISEASE
 - n MALIGNANT ASCITES
 - n ACTIVE TUBERCULOSIS
 - n HEPATOMEGALY
 - n SPLENOMEGALY
- n COLITIS/AUTOIMMUNE DISEASE

END-POINT OF STUDY

n TIME TO RECURRENCE

n OVERALL SURVIVAL INTERVAL

n DISEASE FREE SURVIVAL INTERVAL

WORK-UP

- n INFORMED CONSENT
- n ULTRASOUND EXAM OF WHOLE ABDOMEN
- n CECT, PET-CT (NOT NECESSARY)
- n HEMATOLOGY (TLC >7500)
- n IF TLC IS LOW S/C G-CSF IS GIVEN 24HRS PRIOR TO BLOOD COLLECTION

METHODS

- n PERIPHERAL BLOOD (25-30mL)
COLLECTED FROM PATIENT
 - n HEPARINIZED SYRINGE
 - n MIXED 1:1 IN CELLNUTE
(TRANSPORT) MEDIUM
- n SENT TO LAB WITHIN 16 HOURS
- n BUFFY COAT SEPERATED AND RUN
OVER SURFACE TREATED PLATES

METHODS (Contd.)

- n PLATES INCUBATED FOR 2 HRS
- n GENTLY WASHED TO REMOVE NON-ADHERENT CELLS
- n ADHERENT CELLS CULTURED
- n COMPLETE RPMI-1640/GM-CSF/IL-4
- n ON 6TH DAY EXPOSED TO ICTova8 ANTIGEN

METHODS (Contd.)

- n AFTER 2 DAYS OF EXPOSURE
- n CELLS ARE HARVESTED ALONG WITH MEDIUM
- n CONFIRMED MATURE DC BY CD 83/86
 - n VIABLE TEST BY TRYPAN BLUE EXCLUSION CRITERIA (70-80%)
- n MYCOPLASMA CONTAMINATION– ELISA
 - n AEROBIC/ANAEROBIC CULTURE (QUANTIFICATION TEST) – 6 HRS BROTH TEST

METHODS

- n MATURE DENDRITIC CELLS ALONG WITH CONDITIONED MEDIUM INFUSED UNDER ONDANSETRONE COVER
- n CONTENTS MIXED IN 100 mL OF DNS AND GIVEN I/V IN 15 MINUTES
 - n REQUIRES NO ADMISSION
- n DOMICILIARY TREATMENT PERMISSIBLE AFTER 1 SUPERVISED DOSE
 - n SECOND PBMC COLLECTED AFTER 3 WEEKS OF FIRST DOSE
- n DOSING EVERY MONTH - SIX MONTHS
- n DOSING 6 WK INTERVAL THERE AFTER

ADVERSE EFFECTS

- n MOST COMMON A/E ARE (<50%)
- n FEVER (<100.4 F) WITHIN ½-2 HRS
 - n LETHARGY FOR 2-3 DAYS
 - n BODY ACHE FOR 1-2 DAYS

ADVERSE EFFECTS

- n UNCOMMON A/E (<10%)
- n FEVER ($\geq 100.4^{\circ}\text{F}$) WITH CHILLS & RIGORS
 - n NAUSEA/VOMITING
 - n DECREASED APPETITE
 - n DIARRHOEA
 - n URTICARIA
- n IMMUNE HEMOLYTIC ANEMIA
 - n COLITIS

ADVERSE EFFECTS

NO PATIENT SHOWED GRADE III/IV A/E
INCLUDING

- n BRONCHOSPASM
- n AUTOIMMUNE ORGAN FAILURE
- n HYPOTENSION
- n ALLERGY RELATED EDEMA/ANGIOEDEMA
- n STEROIDS/ADMISSION
- n ANAPHYLAXIS

ADVERSE EFFECTS

- n CTCAE GRADES (NCI GUIDELINES)
 - n NO A/E (50%)
 - n A/E GRADE I (48%)
 - n A/E GRADE II (2%)
 - n A/E GRADE III (NIL)
 - n A/E GRADE IV/V (NIL)

RESULTS

- n 26 PATIENTS WERE ENROLLED INTO STUDY BETWEEN 1ST JAN TILL 30TH MARCH 2006
- n 20 PATIENTS ARE FREE FROM PROGRESSION – IN MARCH 2008
- n 6 PATIENTS – PARTIAL RESPONSE
 - n 3 PATIENTS LEFT AFTER 1 YR
 - n REJOINED AFTER 6 MONTHS

ANALYSIS

- n 20 PATIENTS HAVE STABLE CA-125 LEVELS
- n RADIOLOGICALLY FREE FROM DISEASE
- n PERFORMANCE STATUS REMAINED ECOG 0-1
- n TREATMENT IS CONTINUING

ANALYSIS OF 3 PATIENTS WHO LEFT TREATMENT

- n 3 PATIENTS LEFT TREATMENT AFTER
1 YEAR OF DCT
- n AFTER 4 M - MEDIAN RISE IN CA 125
REACHED TO 800U
- n RECEIVED 2-3 CYCLES OF
CHEMOTHERAPY
- n RETURNED TO RECEIVE DCT AND
CONTINUING TREATMENT

ANALYSIS OF PARTIAL RESPONDERS

- n 6 PATIENTS SHOWED PARTIAL RESPONSE
 - n CA-125 LEVEL KEPT INCREASING AND OPTED FOR CHEMOTHERAPY AFTER 3 MONTHS OF DCT
 - n RECEIVED 6 DOSES OF CHEMOTHERAPY
 - n NOT DEVELOPED RADIOLOGICAL DISEASE

CONCLUSION

- n DC THERAPY – SAFE
- n HIGHLY EFFECTIVE IN PREVENTING RELAPSE IN OVARIAN CANCERS ASSOCIATED WITH CA-125 MARKER POSITIVITY
- n PROLONGS DISEASE FREE SURVIVAL
 - n IMPROVES OVERALL SURVIVAL
 - n MAINTAINS QUALITY OF LIFE

CONCLUSION (MERITS)

- n GOOD COMPLIANCE
- n PATIENTS NEVER REFUSED TREATMENT
- n REPRODUCIBLE PROTOCOL
- n STANDARDIZED PROTOCOL
- n PATIENTS NEED NOT TRAVEL TO LAB
- n NO IMMEDIATE OR LATE A/E

CONCLUSION

- n DENDRITIC CELL THERAPY IS USEFUL IN LOW DISEASE THRESHOLD
- n REQUIRES PHASE III MULTICENTRIC AND RANDOMIZED TRIALS TO BE ADOPTED INTERNATIONALLY
- n BEST UTILIZED IN CONJUNCTION WITH STANDARD THERAPY

THANK YOU

OUR GRATITUDE TO
AMIM CANCER TRUST
AND ITS DONORS
FOR FUNDING THE PROJECT
